

ABSTRACT OF THE INVENTION

The invention relates to an umbrella rib assembly of a foldable
5 umbrella, particularly a five-folded umbrella, which includes a first rib to
fifth rib and several branch ribs and elastic ribs. It is characterized in
that the third rib has formed a bending portion at inner end near to the
second rib. While the umbrella is closed and folded, the fourth rib can
be fallen beside pivoted end of the second rib and the third rib that
10 decreases the closed volume of the umbrella. So the closed umbrella is
very conveniently for carrying or storing.
